

# Regional and State Income Gains in 1970

Personal income rose 7 percent nationally from 1969 to 1970. For States and regions, there was a generally close relationship between the size of the change in income from commodity-producing industries and the size of the gain in total personal income.

Tables of State and regional data begin on page 30. An extension of tables 4-63 and 70 back to 1948 is available on request. For the convenience of users, estimates of total and per capita personal income by Census region are now shown in tables 1 and 2.

come per capita rose more than  $7\frac{1}{4}$  percent from 1969 to 1970. However, because of the continued fast rise of consumer prices—up about  $4\frac{1}{2}$  percent as measured by the implicit price deflator for personal consumption expenditures—per capita disposable income in real terms grew much less—about  $2\frac{1}{2}$  percent for the Nation as a whole.

In six of the eight regions, the rise in pre-tax personal income per capita (in current dollars) was at least 5 percent—slightly more than the size of the national consumer price gain—resulting in increases in real income. The exceptions were the Far West and Great Lakes. Per capita income was up by 5 percent or more in 39 States and the District of Columbia. The exceptions were: California, Oregon, New Hampshire, Iowa, Ohio, Delaware, Nebraska, Indiana, Michigan, Washington, and North Dakota—the last being the only State to register a decline. At the other end of the scale, there were increases in pre-tax income per capita ranging from 8 to  $11\frac{1}{2}$  percent in the District of Columbia and seven States: West Virginia, Hawaii, Mississippi, New Mexico, Colorado, Arizona, and Utah.

## Total Personal Income

Developments in commodity production were a major factor affecting total personal income changes from 1969 to 1970. While there was a national gain of 7 percent in the personal income total, income from commodity-producing industries—which makes up close to 30 percent of the total—grew only 1 percent (chart 8 and table A). Wage and salary payments in manufacturing were unchanged and farm income was down. Wage payments in the other two indus-

tries of the commodity-producing group rose significantly; the gain in construction was 6 percent, and in mining 8 percent. However, these two industries account for only about one-fifth of total income from commodity-producing industries.

Among other components of personal income, there were large gains in transfer payments (up more than 20 percent) and government and service payrolls (up 10 percent). While the increases in these three components were important factors in the growth of total income, the three components tended to increase at a fairly uniform pace in the regions and States so that they accounted for little of the interregional variation in income growth rates. Rates of change in most other major income components were close to the national average and also comparatively uniform among the regions and States. Thus, regional and State variations in the growth rate of total income last year primarily reflected variations in the size of the change in income from commodity production and, secondarily, variations in the importance of such income in the total (chart 8 and table A).

In the Great Lakes—the only region where commodity production is well above the national average in importance—total personal income rose only 5 percent, by far the smallest regional advance. In the Plains, New England, Mideast, and Southeast—regions where commodity-producing industries are of about average importance—1970 income gains ranged from somewhat below average (Plains) to somewhat above average (Southeast). In the Southwest and Rocky Mountains—regions where the importance of commodity-producing industries is below the national average—income growth was much stronger than the national average.

PERSONAL income in the Nation as a whole rose 7 percent from 1969 to 1970. Increases of at least  $5\frac{1}{2}$  percent were registered in seven of the eight regions, 42 of the States, and the District of Columbia. The weakest region was the Great Lakes, where personal income rose a little less than 5 percent.

## Per capita income

Per capita income (total personal income divided by total population) rose nearly 6 percent in the Nation last year. Personal tax payments per capita were down by  $1\frac{1}{4}$  percent, as Federal personal tax rates and payments declined while State and local rates and payments continued to rise. As a result, disposable personal in-

**Note.**—The State income estimates were prepared in the Economic Measurement Branch, Regional Economics Division by Wallace Bailey, Jr., Kenneth Berkman, Michael Carroll, Vivian Conklin, Joseph Cease, Q. Francis Dallavalle, Virginia Davis, Linnea Hesen, Kenneth Horowitz, Gordon Lester, Allan Millican, Elizabeth Queen, William Reid, Jr., Victor Sabadachny, Maurice Schlak, and Mary Schneider under the direction of Edwin J. Coleman. Special programming for this article was prepared by Q. Francis Dallavalle and David Cartwright.

Table A shows that, with the exception of the Far West, there is a close relationship between the size of the change in income from commodity-producing industries and the size of the gain

in total personal income. The Far West, however, had the sharpest decline in income from commodity-producing industries but only a mild shortfall from the national average in the growth of

total income. This reflects the below-average importance of commodity-producing industries in the region.

(Continued on page 41)

CHART 8

**Personal Income**

Nationally, PERSONAL INCOME increased 7 percent in 1970

Income from COMMODITY PRODUCTION\* grew barely at all...

while the aggregate of OTHER COMPONENTS rose about 9 1/2 percent

Regionally, the smallest personal income gains tended to be in those areas where income from commodity production was weakest and where commodity-producing industries are most important

\*Wages and salaries in manufacturing, mining, construction, and farming, and farm proprietors' income.

Footnotes to Table 63:

1. Consists of net income of farm proprietors', farm wages, and farm other labor income less personal contributions under the OASDHI program.

2. Consists of income disbursed directly to persons by the Federal and State and local governments. Comprises wages and salaries (net of employee contributions for social insurance), other labor income, interest and transfer payments.

3. Equals total personal income less farm incomes and government income disbursements.

Note.—Details may not add to total because of rounding.

Footnotes to Table 70:

1. Consists of wage and salary disbursements, other labor income and proprietors' income.

2. Does not include earnings of military personnel.

3. Less than \$500,000.

Note.—Details may not add to total because of rounding.
